### 3.2 Export price

Figure 3.2-1 Monthly export volume and price of clethodim technical in China, 2013-2015

Note: 1. The volume is calculated by 100% active ingredient.

2. The price in total is weighted average price.

3. These data are obtained based on CCM's analysis of 8 digit HS code of China Customs Data. The Customs data stem from the number of cargoes, and the prices may be FOB prices, C&F prices or CIF prices. However, it is very hard to distinguish which shipment is calculated by FOB price, C&F price or CIF price as there is no specific explanation in 8 digit HS code Customs Data. So

*the prices in above table are weighted average prices of FOB prices, CIF prices and C&F prices, and the relevant weight is the export volume of each shipment. Here is the calculation formula:*

*Weighted average prices = (export volume 1 × price 1 + export volume 2 × price 2+...+ export volume n × price n) / (export volume1+ export volume 2+...+ export volume n).*
