Contents

Executive summary	1
Methodology	3
1 Market information of paraformaldehyde	6
1.1 Global overview of PF	6
1.2 PF development in China	6
1.3 Properties of PF	9
2 Production situation of PF in China	11
2.1 Producers of PF in China	11
2.2 Capacity and output of PF	15
2.3 Price of PF	18
2.4 New dynamics of raw material of PF—formaldehyde	21
2.4.1 Supply of formaldehyde in China	22
2.4.2 Price of formaldehyde in China	23
2.5 Industrial affair of PF in China	24
3 Import & export analysis of PF	27
3.1 Overall situation of PF trading	27
3.2 Import analysis of PF 2018.....	28
3.3 Export analysis of PF 2018.....	31
3.4 Export levy of PF (VAT & tax rebate)	33
4 End use segments of PF in China	34
4.1 Consumption of PF in glyphosate	35
4.1.1 Dynamic of glyphosate development in China.....	36
4.1.2 Routes for glyphosate producing.....	39
4.1.3 Anti-dumping issues.....	42
4.1.4 Technology trend and its influence to PF utilization	46
4.2 Consumption of PF in other pesticides	47
4.3 Consumption situation of PF in resin industry	49
4.4 Consumption situation of PF in pharmaceutical industry.....	52
4.5 Consumption situation of PF in other industries.....	53
5 Forecast on PF industry in China	54
5.1 Factors influencing future development of PF.....	54
5.1.1 Driving forces.....	54
5.1.2 Barriers	56
5.2 Supply and demand forecast on PF 2019–2023.....	57

1. Introduction

This 15th edition PF report, formulated in May 2019, focuses on the situation of China's paraformaldehyde (PF) industry in 2018 and Q1 2019, as well as forecasting its future development trend. The report aims to disclose the latest production and market information of China's PF industry. The data for 2018 and before are based on CCM's database and other various sources as mentioned in the section of methodology below.

2. Approach for this report

The report is based on data sourced by diverse methods, which are listed as follows:

- Desk research

Desk research includes access to published magazines, journals, government statistics, industry statistics, customs statistics, association seminars as well as information on the Internet. Much work has gone into the compilation and analysis of the information obtained. Where necessary, information has been checked and discussed internally related to market structure and performance characteristics as key producers, key end users, production levels, end user demand and so on.

- Field survey

CCM has conducted an extensive field survey using telephone interviews in order to survey the PF market in China.

The interviewees included the following groups:

- Key producers
- Key end users
- Key traders
- Material suppliers
- Associations involved
- Industry experts

- Network search

CCM employs a network to contact industry participants by using B2B websites and software.

- Data processing and presentation

The data collected and compiled was variously sourced from:

- CCM's database
- Published articles from periodicals, magazines, journals and third party databases
- Statistics from governments and international institutes
- Telephone interviews with domestic producers, joint ventures, service suppliers and government agencies
- Third-party data providers
- Customs statistics
- Comments from industrial experts
- Professional databases
- Information from the Internet

The data has been combined and cross-checked to ensure that this report is as accurate and methodologically sound as possible. Throughout the process, a series of discussions were held within CCM to systematically analyse the data and draw appropriate conclusions.

3. Executive summary

China's paraformaldehyde (PF) industry has witnessed a fast development in the past few years.

- Production

The domestic PF production is mainly distributed in Hebei, Jiangsu, and Shandong, relying on abundant supply of methanol and convenient transportation.

The number of PF producers in China decreased from XXX in 2017 to XXX In 2018, and the national capacity of PF decreased from XXX t/a in 2017 to XXX t/a in 2018. Because of stricter environmental protection policies or poor performance, 12 companies stopped PF production completely in 2018.

China's PF output increased to XXX tonnes in 2018, driven by the increasing domestic demand, though the export volume decreased a little.

- Import and export

China is a net PF importer. In 2018, China imported XXX tonnes of PF, and top 2 import origins were Spain and Taiwan Province, with the share of XXX% of the total import volume. China also imported XXX tonnes from Indonesia, a new but vigorous comer.

China's export volume of PF has kept decreasing since 2015, and China exported XXX tonnes of PF in 2018, with a year-on-year growth rate of XXX%. Top export destinations of China's PF with the volume of over 1,000 tonnes in 2018 included South Korea, Thailand, Ethiopia, and Djibouti, whose total volume accounted for XXX% of national total export volume.

- Technology

In China, there are two main technologies to produce PF, namely rake drying method and spray drying method. Although the rake drying method still lags behind the spray drying method both in quality and environmental friendliness, it is adopted by most Chinese PF producers due to its low investment amount. In 2018, XXX PF producers adopted rake drying method with a share of XXX% by capacity.

- Price

Generally, the price fluctuation of PF in China is greatly influenced by raw materials, methanol or formaldehyde. In 2018, the average ex-works price of PF increased rapidly to about USDXXX/t, driven by increasing price of formaldehyde and methanol, and production cuts of some PF producers triggered by stringent environmental protection inspections, especially in Shandong and Hebei.

- Consumption

In China, PF is mainly consumed in agrochemical, resin and pharmaceutical industries, etc. The agrochemical industry is the largest consumption field of PF, taking up XXX% of the total domestic PF consumption in 2018. Glyphosate technical (AEA pathway) is the largest end use segment, and the consumption of PF in glyphosate accounted for XXX% of the national total in 2018. The consumption of PF in resin industry accounts for XXX% of the national total in 2018.

4. What's in this report?

Note: Key data/information in this sample page is hidden, while in the report it is not.

...

2 Production situation of paraformaldehyde in China

2.1 Producers in China

XXX companies related to PF were studied. As of March 2019, CCM finds,

- XXX of them are active producers;
- XXX of them suspended production;
- XXX of them stopped production completely;
- XXX of them are potential producers.

These XXX potential producers include those finished construction but have not put into production yet, those under construction and those have just published environment impact assessment of PF projects as of March 2019.

...

2.2 Capacity and output

After years of rapid growth, China's PF capacity kept increasing from XXX t/a in 2006 to XXX t/a in 2011, but it decreased to XXX t/a in 2012 because several small PF producers, which had weak competitiveness under the circumstances of overcapacity and sluggish PF market, stopped PF production. The PF capacity increased sharply in 2013 along with the launch of some new PF production lines and had a slight increase to XXX t/a in 2014 because Jiangsu Sanmu launched its XXX t/a PF project.

3 Import & export analysis of paraformaldehyde in China

3.1 Overall situation of PF trading

The domestic PF is more and more popular with customers at home and abroad, because of its high quality and low price in recent years. From 2010 to 2014, the export volume of PF in China kept increasing, while the import volume of PF fluctuated.

In 2015, both export volume and import volume of PF in China decreased, down by XXX% and XXX% respectively compared with those in 2014.

5 Forecast on paraformaldehyde industry in China

5.2 Supply and demand forecast on PF 2019–2023

Demand forecast to 2023

In 2018, the domestic glyphosate industry contributes to about XXX% of the domestic demand of PF. The future trend of PF demand in China will be similar with the development trend of the domestic production of glyphosate technical.

Demand for PF in China is expected to keep increasing from 2019 to 2023. It's predicted that demand for PF will be XXX tonnes in China in 2023, at a CAGR of XXX% in 2019–2023.
