1 Forecast of copper salts supply

1.1 Forecast of copper oxychloride supply

Output of copper oxychloride is expected to XX thanks to fine economic situation in China in the next few years, XX from 16,000 tonnes in 2011 to XX tonnes in 2015, with XX of about XX. It is estimated that annual XX rate of copper oxychloride by output would XX year by year with gradual global economic recovery and more applications of copper oxychloride in the future.

Figure 1.1-1 Output forecast of copper oxychloride and annual growth rate in China, 2011-2015

Source: CCM International

Before 2010, copper oxychloride producers are mainly concentrated in East China and South China, such as Jiangsu Province, Shanghai City and Guangdong Province. But with this situation changing with decreasing labor force and adjustment of industrial structure in China, more copper oxychloride producers will be located in Northeast China and Mid-China in the future.

Price of copper oxychloride is supposed to climb up in China since 2011, which is mainly promoted by two factors--the increasing cost of copper and labor force as well as RMB appreciation which forces producers to raise export price of copper oxychloride to keep a certain profit. In a long term, copper oxychloride producers can keep their products' prices at a high level only through improving products' performance and service.
